

New peat-free Jiffy Pots

Our new peat-free sphagnum moss pot is a sustainable alternative to both peat and plastic. Not only that, the latest member of the Jiffy Pot peat-free range ensures great plant performance. And it's our most robust pot to date.

Developing sustainable plant
growing solutions together

Combining performance and sustainability

GREAT RESULTS

Peat-free sphagnum moss Jiffy Pots are highly suited to both indoor and outdoor crop production. They deliver first-rate results in a very wide range of crops.

Excellent air flow and drainage ensure rapid development of strong roots in everything from young plants and trees to herbs and vegetables, soft fruit, and wine grapes.

STRONG & CARBON-LITE

Developed at our Innovation Center in the Netherlands, the new pots offer exceptional strength and a long lifespan but are carbon-lite.

They are made from renewable, plant-based materials sourced in the Nordics and always processed in our own food safety-certified production facilities.

SPHAGNUM MOSS

Sphagnum moss is an all-natural, renewable resource. It's a sustainable alternative to both peat and plastic.

The moss is gathered using a unique technology that ensures only part of the living plant is taken. The method returns extracted water to the wetland and leaves plentiful spores for new moss to grow.

Do you need a sustainable peat-free and plastic free solution? Peat-free sphagnum moss Jiffy Pots are the answer. Here's why:

Flexible, robust and efficient containers

Easy to handle rims

Wide range of shapes, sizes, and strips

Quick take-off after transplanting

Lower CO₂ emissions compared to peat

Pot-and-all transplantation saves labor and minimizes transplant shock

A marketable difference to non-fiber competitors: Become your clients' go-to partner for planet-friendly crops
